

IT Policy

TechNova Pvt. Ltd. — Internal Policy Document

Document Code	Version	Effective Date	Policy Owner
TN-IT-201	2.5	01 April 2026	IT Team

Purpose and Scope

This policy sets out how TechNova Pvt. Ltd. issues, supports, and secures IT equipment, software, and accounts, and what is expected of employees using them. It applies to all employees, interns, and contractors who are issued Company IT assets or access to Company systems. It should be read together with the Security Policy, which covers data protection and information security in more depth.

Asset Issuance

- New employees are issued a standard laptop, charger, and, where applicable, a headset, before or on their first day, as coordinated during onboarding (see Onboarding Guide).
- Additional equipment (external monitor, docking station, mobile phone) may be requested via the "IT → Request Asset" form on the HR Portal, subject to role eligibility and Function Head approval.
- All issued assets are recorded against the employee's profile in the IT Asset Register, including serial number and issue date.
- Assets remain Company property at all times and must be returned in good working condition on exit, internal transfer to a non-asset-eligible role, or when requested by IT.

Standard Asset Catalogue

Role Type	Standard Issue
Engineering	High-performance laptop (16GB+ RAM), external monitor on request, dev-tools bundle.
Design / Product	Laptop with dedicated graphics where required, external monitor, stylus tablet on request.
Sales / Customer-facing	Standard laptop, mobile phone (where role requires), headset.
Other corporate roles	Standard laptop, headset.

Acceptable Use

- Company devices and accounts are provided for business use; limited, reasonable personal use (e.g., checking personal email) is permitted provided it does not interfere with work or breach this policy.

- Do not install unlicensed or unauthorised software; use the Software Request process below for anything not pre-approved.
- Do not disable or bypass security controls (antivirus, disk encryption, screen-lock, MDM profile) installed on Company devices.
- Do not use Company systems to access, store, or distribute illegal, discriminatory, or offensive content.
- Company email and systems may be monitored for security and compliance purposes as permitted by law; employees should not expect complete privacy in Company-provided accounts.

Software and Licensing

A catalogue of pre-approved software is available for self-service installation via the Company Software Centre. For tools outside this catalogue, submit a request via "IT → Software Request" with a business justification; IT reviews the request for security, licensing cost, and overlap with existing tools, typically within 3 working days. Employees must not use personal or pirated software licences for Company work.

Accounts and Access Management

- Each employee is issued a single sign-on (SSO) account at onboarding, providing access to email, chat, and core business applications based on their role.
- Access to sensitive systems (production infrastructure, customer data, finance systems) follows the principle of least privilege and requires manager and system-owner approval.
- Access reviews are conducted quarterly by IT and system owners to remove access no longer needed (e.g., after a role change).
- Shared or generic logins are not permitted except for specific service accounts approved and documented by IT Security.

Password and Authentication

Requirement	Standard
Minimum password length	12 characters, with a mix of letters, numbers, and symbols
Password rotation	Every 90 days for privileged/admin accounts; SSO password rotation prompted periodically based on risk signals
Multi-factor authentication (MFA)	Mandatory for SSO login, VPN, and all systems holding customer or financial data
Password reuse	Not permitted across the last 6 passwords

Remote Access and BYOD

Access to internal systems from outside the office network must go through the Company VPN or an approved secure gateway. Use of personal devices (BYOD) to access Company email or chat is permitted only after

enrolling the device in the Mobile Device Management (MDM) system, which enforces a passcode and remote-wipe capability for the Company workspace on that device; personal data outside the managed workspace is not affected.

Core Business Applications

Category	Approved Tools
Email and Calendar	Company Google Workspace account
Chat and Collaboration	Slack (internal), Zoom (video calls)
Document Storage	Google Drive (Shared Drives for team/project content)
Project and Task Tracking	Jira and Confluence (Engineering/Product); Asana (other functions)
Code Hosting	GitHub Enterprise (Engineering only, access via SSO)

Using unapproved alternatives to these tools for Company work (e.g., personal cloud storage, non-Company messaging apps) for business data is discouraged and may breach the Security Policy's data-handling rules.

Printing and Physical Media

Shared printers are available at each office floor for business use; printing of confidential material should use the "secure print" release feature where available, so documents are only printed once the employee is physically at the printer. USB drives and other removable media are discouraged for Company data; where unavoidable, only IT-issued encrypted drives should be used.

Using IT Assets Outside India

Employees travelling internationally with a Company laptop should inform IT beforehand so any destination-specific restrictions (e.g., import/export controls on encryption software) can be checked. VPN and MFA requirements continue to apply while travelling.

Roles and Responsibilities

Role	Responsibility
Employee	Use assets responsibly, follow acceptable-use rules, report issues and incidents promptly.
IT Helpdesk	Issue and maintain assets, resolve support tickets within target timelines.
IT Security	Manage access controls, MFA, and respond to security incidents (see Security Policy).
Manager	Approve asset and software requests for their team, confirm asset return on team exits.

IT Helpdesk and Support

Issue Type	Target Resolution Time
Password reset / account lockout	Same working day
Software installation request	3 working days
Hardware fault (in-office)	2 working days (loaner device provided if needed)
Hardware fault (remote/WFH)	3–5 working days including courier pickup/replacement
New asset request	5 working days, subject to approval and stock availability

Raise a request via the IT Helpdesk portal ("Help → IT Support"), email ithelpdesk@technova.example, or extension 4100 for urgent issues blocking work.

Onboarding and Offboarding of Access

IT provisions standard access automatically once HR confirms a new joiner's start date, so core accounts are ready on day one (see Onboarding Guide). On separation, HR's exit workflow triggers IT to disable the employee's accounts and access at end of business on the last working day, unless an earlier deactivation is required for security reasons.

Contact and Escalation

For day-to-day support, use the IT Helpdesk channels listed above. For a security concern (phishing email, suspicious activity, suspected breach), escalate immediately per the Security Policy to security@technova.example rather than waiting on a standard helpdesk ticket.

Data Backup

Employees should store work files in Company-approved cloud storage (the corporate Google Workspace/OneDrive account) rather than only on the local device, so that data is backed up and recoverable if a device is lost or damaged. IT does not guarantee recovery of files stored only on local device storage.

Lost, Stolen, or Damaged Devices

- Report a lost or stolen device to the IT Helpdesk and your manager immediately, and file a police report for theft where required for insurance purposes.
- IT will remotely lock and, where necessary, wipe the device to protect Company data.
- A replacement device is issued based on asset availability; repeated loss/damage may be reviewed with the employee and their manager.

- Accidental damage during normal business use is generally covered by the Company; damage due to clear negligence may result in a partial cost recovery, assessed case by case.

Asset Return on Exit

All Company IT assets (laptop, charger, monitor, mobile phone, access cards) must be returned to IT or Admin on or before the employee’s last working day, as part of the exit process described in the Employee Handbook. Full and Final settlement may be delayed if assets are not returned or their condition is not verified by IT.

Frequently Asked Questions

Question	Answer
Who do I contact for a laptop issue?	IT Helpdesk at ithelpdesk@technova.example or ext. 4100, or via "Help → IT Support" on the HR Portal.
Can I install any software I want?	Only pre-approved software from the Software Centre, or software approved via a Software Request.
Is MFA required for all systems?	Yes, for SSO login, VPN, and any system holding customer or financial data.
What happens if I lose my laptop?	Report it immediately; IT will remotely lock/wipe it and issue a replacement based on availability.

Document Revision History

Version	Date	Summary of Change
2.0	Apr 2022	Introduced MDM for BYOD and quarterly access reviews.
2.3	Apr 2024	Updated password and MFA requirements.
2.5	Apr 2026	Added remote/WFH hardware support timelines.
